ABOUT

Professional Summary

Senior Frontend Software Engineer with **8+ years** of experience. Worked both at large companies such as EPAM Systems, Sony, and Glovo, with development teams of up to 60 engineers, and on smaller projects with teams of 2–10 people. Experienced in Agile and Scrum methodologies and familiar with the full software development life cycle.

Leadership & Team

- **Led a frontend development team** and managed the release process
- Participated in feature planning and development **phase planning**
- Took part in hiring developers for the project and conducted onboarding for new team members

Engineering Highlights

- Optimized frontend application bundle size, improving load times for end users
- Decomposed monolithic applications into micro-frontends to enhance performance
- Implemented SEO optimization for web applications
- Contributed to the development of a UI component library
- Built complex dynamic data-entry form systems
- Covered applications with test cases and improved overall fault tolerance

DevOps & Infrastructure

- Configured CI/CD pipelines
- Containerized applications with Docker
- Analyzed infrastructure performance in Kubernetes

SKILLS

Core: JavaScript, TypeScript, HTML5, CSS3, SASS
Frameworks: React, React Native, Next.js, Nest.js

Frontend core: Redux, Redux Toolkit, RTK Query, GraphQL, React testing library, Formik, React hook form, Yup, Zod, WebSocket, Socket.io, MaterialUI, Mantine, Tailwind, Lodash, Cypress, Jest, styled components, css-in-js,
Other: Docker, Docker-compose, Kubernetes, OpenLens, Webstorm, Postman, Git, Jira, Figma, Chrome DevTools, Swagger, Xcode, Claude Code

EXPERIENCE

GLOVO: 11/2024 - 10/2026, 2 YEARS

- Developed the user interface and delivered an AI-powered user chat feature as part of the development team. ***Technologies:*** *Next.js, React hook form, Axios, Mantine.*
- Introduced unit testing into an existing project, reducing production defects by 23%. ***Technologies:*** *React testing library.*
- Set up system monitoring, reducing end-user bug reports by 7%
- Added offline mode to the app, which increased the average user session duration by 17%. ***Technologies:*** *Sentry.*

SONY: 08/2023 - 11/2024, 1.3 YEAR

- Designed and built from scratch an in-game notification generation and delivery system as part of the development team. ***Technologies:*** *React, RTK Query, React hook form, React testing library, Zod.*
- Interviewed and hired 3 new developers; designed and conducted onboarding sessions
- Prepared and deployed releases and ran demo sessions for the end client
- Introduced and rolled out a unit testing policy across the team, bringing code coverage to 95%
- Planned development phases for the frontend team

EPAM: 07/2021 - 08/2023, 2.2 YEARS

- Migrated an e-commerce store from PHP to Next.js as part of the development team; the new version increased conversion rate by 12.4% and improved page load speed by 37%. ***Technologies:*** *Next.js, GraphQL, Formik, Yup, Material UI*
- Implemented SEO optimization for the online store

OMEGA-R: 05/2019 - 06/2021, 2.1 YEARS

EDUCATION

VOLGA STATE UNIVERSITY OF TELECOMMUNICATIONS AND INFORMATICS - BACHELOR, 2016 - 2019
Master of Science, Information Security
